Making graphics-based text accessible to the blind and those with low vision

OpenBook converts printed documents or graphic-based text into an electronic text format on your PC, using quality speech and the latest in accurate optical character recognition (OCR). Easy switching between the Nuance OmniPage® and ABBYY FineReader® OCR engines allows you to choose the OCR engine that best suits your scanning needs.

Clear and Understandable Speech

OpenBook provides you with the flexibility to use either of two leading text-to-speech software synthesizers: RealSpeak™ Solo and Eloquence. RealSpeak features a natural, human-sounding voice to enhance your reading experience. Eloquence provides practical and efficient synthesized speech for editing or skimming documents.

Customized Viewing

The many low vision features of OpenBook allow you to tailor the appearance of text on your screen, including font style, size, character spacing, and colors. A Split View option allows for easy comparison of the original document and the results of OCR conversion. Masking and Word Spotlighting features synchronize with the text being read, making it easy to follow the screen position during reading.

Maximize Your Productivity

Share your documents with friends, co-workers, or relatives. A Launch Manager lets you easily export OpenBook documents to other applications like Microsoft® Word or Notepad. The fax capability of OpenBook lets you send and receive faxes using your PC modem. Use OpenBook to create photocopies of printed documents and import documents from other applications and read and work with them in OpenBook.

Mark Up Your Documents

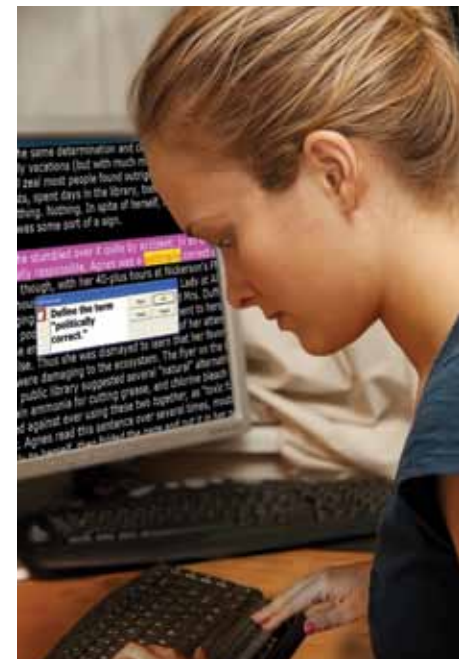

With the Highlight feature in OpenBook, mark important passages of a document for later reference and use highlights to quickly navigate within your document. OpenBook also enables you to insert comments in a document, and those comments can be announced during document review or remain hidden. Highlights and Comments also can be exported to new documents for easy review.

Use the Split View option to compare original documents and the results of OCR conversion
